NATIVE AND MASS-LABELLED TRICLOSAN IN METHANOL

Approximately 2 years ago, **WELLINGTON** introduced reference standard solutions of native and mass-labelled Triclosan [5-chloro-2-(2,4-dichlorophenoxy)phenol] in nonane.

Structure of Triclosan.

Triclosan is widely used as an antibacterial and antifungal agent in various common consumer products such as toothpaste, deodorants, antibacterial soaps and detergents. The increasing use of these products over the last 30 years has led to Triclosan being found in the environment. Recently, there has been an upsurge in studies aimed at understanding the potential impact of this compound on the environment.

In response to customer enquiries, **WELLINGTON** has now prepared solutions of native and mass-labelled Triclosan in methanol. This will permit the direct use of these reference standard solutions for analyses utilizing HPLC.

TRICLOSAN

Catalogue Number	Product (methanol solution)	Qty/Conc
TCS-M	5-Chloro-2-(2,4-dichlorophenoxy)phenol	1.2 ml 50 µg/ml

MASS-LABELLED TRICLOSAN

Catalogue Number	Product (methanol solution)	Qty/Conc
MTCS-M	5-Chloro-2-(2,4-dichloro[¹³ C ₆]phenoxy)[¹³ C ₆]phenol	1.2 ml 50 µg/ml

All of these products are in stock and available for immediate shipping. For pricing information please contact the distributor that serves your area, or by e-mail at info@well-labs.com
